(ABGE-) ABGENIX INC

Gudas J;

WPI; 2003-587113/55. N-PSDB; ADC99774. New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.

Claim 1; SEQ ID NO 1; 78pp; English.

The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the pancreatic or colorectal tumours, specifically melanoma, oesophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intraepithelial neoplasia and cancers including colorectal, breast or lung canneer, as well as other malignancies. The current sequence is that of the anti-human MUC18 monoclonal antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a heavy or light chain maino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the cell surface such as tumours, specifically melanoma, oesophagaal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and carvical intraepithelial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The teurrent sequence is that of the anti-human MUC18 monoclonal antibody heavy chain protein of the invention.

The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has overstant and can be used in the production of a vaccine. The monoclonal antibodies against the WUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-WUC18 antibody heavy chain, variable region,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel monoclonal antibody used for inhibiting tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a menoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUCI8, and contacting the tumour with the antibody resulting in thibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUCI8 antigen are useful for diagnosing and antibodies against the MUCI8 antigen are useful for diagnosing and treating tumours, inhibiting cell invasion associated with melanoma, or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUCI8 antibody heavy chain, variable region,

The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence represents a heavy chain from an MUC18 tumour antigen-specific

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence represents a heavy chain from an MUC18 tumour antigen-specific

The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain variable domain where the antibody binds to MUCLB. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUCLB on the pancreatic or colorectal tumours, especially melanoma, oseophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intrappithalial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUCLB monoclonal antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

                                                                                                                                                                                                                                                                                                                                                                                                                             tumour growth in an animal. The tumour inhibition process comprises belecting an animal in need of treatment for a tumour, providing a monimal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the WUC18 antipogn are useful for diagnosing and treating tumours, inhibiting cumour growth (e.g. melanoma, lung tumour of tumour metastasis), inhibiting cell invasion associated with melanoma, or sequence represents an anti-WUC18 antibody heavy chain, variable region, protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

The invention comprises a method for inhibiting cell proliferation associated with expression of MUC18 tumour antigen. The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting cell proliferation in patients with tumours, carcinomas, cancer and other malignancies. The present amino acid sequence represents a heavy chain from an MUC18 tumour antigen-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PSLKSRVTISVDTSKNQFSLRLSSVTAADTAVYYCARDQGQWLLPDAFDIWGQGTMVTVS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the pancreatic or colorectal tumours, specifically melanoma, oesophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and cervical intraepithelial neoplasia and cancers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUC18 monoclonal antibody
                                                                                                                                                                                                                                                                                                                                                                                                              New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.
                                anti-human MUC18 monoclonal antibody; heavy; light chain variable domain; cytostatic; melanoma; oesophageal; pancreatic; colorectal tumour; cervical carcinoma; intraepithelial neoplasia; colorectal; breast;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 PSLKSRVTVSVDTSKNQFSLKLNSVTAADTAVYYCARDFGGWLVPDAFDIWGQGTWVSVS 120

tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds WUCIS, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has cytostatic and can be used in the production of a vaccine. The monoclonal antibodies against the WUCIS antigen are useful for diagnosing and treating tumours, inhibiting cumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUCIS antibody heavy chain, variable region, protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 PSLKSRVTISVDTSKNOFSLRLSSVTAADTAVYYCARDQGQWLLPDAFDIWGQGTMVTVS 120

                                                                                                                                                                                                                                                                               The invention comprises a method for inhibiting cell proliferation associated with expression of MUCIB tumour antigen. The method involves administering anti-MUCIB monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanoma or tumour cell) proliferation associated with the expression of MUCIB tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method is useful for inhibiting ocal proliferation in patients with tumours, cancer and other malignancies. The present amino acid sequence represents a heavy chain from an MUCIB tumour antigen-specific

The invention relates to a novel method for identifying a B cell carrying a surface immunoglobulin (Ig) molecule having a binding site for an antigen of interest. The method comprises contacting a sample putatively containing the B cell with the antigen of interest and with a receptor specifically binding to the Ig molecule, and assessing the presence of the detectable signal. The invention further comprises: an antibody generated by the method above which is specific for human CD28 or comprising an amino acid(8) sequence(8) also given in the specification, and advice for assessing the presence of a detectable signal defined above, where the device comprises a closed system for the detection laser-beam and a catcher tube, and where the B cell of interest can be collected as a single cell by means of an electrochemical device, which is triggered by an electric signal generated by the fluorescence activated cell sorter (FACS) device, where the electrochemical device contains the nozzle of the steady catcher tube liquid stream for a programmed time over a collecting tube, microtiter plate or other contains a surface Ig molecule having a binding site for an programmed time over a collecting tube, microtiter plate or other contains a fere a B cell is sorted. The method is useful for identifying a B cell carrying a surface Ig molecule having a binding site for an employed in the construction of proteins such as antibodies or its fragments or derivatives useful in therapeutic approaches. The method is also useful as an altérnative to phage display for the gain of antibodies or its fragments. This sequence represents an S2 cell derived human contains the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

The invention provides a neuromodulatory agent (1) capable of promoting neurite outgrowth, regeneration, remyelination and neuroprotection in central nervous system (CNS) (I) is capable of inducing remyelination, promoting cellular proliferation of glial cells, and promoting Ca2+ signaling with oligodendrocytes. An humanised antibody to (1) can be selected from antibody sHIGAZ (LYM 22), ebvHigM MSI19D10, ebv HIGM CB2G8, AXM74, CB2IB12, CB2IB2 (LYM 22), ebvHigM MSI19D10, ebv HIGM CB2G8, AXM74, CB2IB12, CB2IB2 (LYM 22), ebvHigM MSI19D10, ebv HIGM CB2G8, AXM74, CB2IB12, CB2IB2 (LYM 22), ebvHigM MSI19D10, ebv HIGM CB2G8, AXM74, CB2IB12, CB2IB2 (LYM 22), ebvHigM MSI19D10, ebv HIGM CB2G8, AXM74, CB2IB12, CB2IB2 of CMSI19ES (I) is capable of binding to structures and cells in consume in fected with Strain DA of Theiler's murine encephalomyelitis of a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMWY) or for treating a human being having multiple sclerosis, or a human or domestic animal with a viral demyelinating disease, or a post-charmal disease of CNS. (I) is also useful for an in vitro method of standaring the proliferation of glial cells from mixed cell culture. (I) is also useful for preventing infection by a bacterium, virus or like care useful for preventing infection by a bacterium, virus or like pathogen that causes demyelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful for tracting multiple sclerosis, Parkinson's disease, Alzheimer's clease, amyotrophic lateral sclerosis, Parkinson's disease, Alzheimer's clease, amyotrophic lateral sclerosis (ALS), a viral demyelinating conditions in the CNS where nerves are

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 39, Sequence 65, Sequence 65, Sequence 39, Sequence 39, Sequence 25, Sequence 25, Sequence 25, Sequence 25, Sequence 27, Sequence 41, Assequence 41

Sequence 65, Application US/09490324

Patent No. 6828422

GENERAL INFORMATION:

APPLICANT: Knappik, Achim

Pack, Peter

Ilag, Vic

Ge, Liming

Moroney, Simon

Pluckchun, Andreas

ITILE OF INVENTION: Protein/(Poly)peptide libraries

NUMBER OF SEQUENCES: 373

CORRESPONDENCE ADDRESS:

ADDRESSEE: James F. Haley, Jr., Esq. c/o Fish & Neave

CITY: New York

CITY: New York

CORRESPONDENCE ADDRESSEE: James F. Haley, Jr., Esq. c/o Fish & Neave
